

SENTINEL_P1 Retrieval Augmented Generation A Survey

This paper surveys hybrid retrieval for question answering over heterogeneous corpora.

SENTINEL_P2 Background

Dense retrievers embed queries and passages into a shared vector space. Sparse retrievers match lexical overlap. Hybrid retrieval combines both.

SENTINEL_P3 Hybrid Retrieval

The survey says hybrid retrieval consistently outperforms either branch alone, because lexical and semantic matching fail on different queries.

SENTINEL_P4 Evaluation

[illegible]
